

A close-up photograph of a mechanical assembly, likely a part of a machine tool. The image shows several square carbide razors mounted on a dark, textured metal base. Each razor has a central circular hole with a small, dark, rounded tip. The razors are arranged in a grid-like pattern, with some showing signs of wear and discoloration. The background is dark and out of focus, emphasizing the sharp edges and metallic surfaces of the razors.

# **New Carbide Rounded Razors**

# Longer lifetime & outstanding performance

## Product benefits

### • Flawless finishing in high demanding applications:

The range delivers a **perfect finishing**, as a result of tight tolerances, bore centering and thickness.

**Premium roughness** is ensured by state-of-the-art grinding technology.

### • Outstanding longer lifetime:

Fine-grain Carbide (K015), specifically formulated to achieve a high level of hardness and tenacity.

The formula guarantees the **greatest resistance to wear and impact**.

## Applications

Spiral or helical planer heads.

## Materials

Wood and derivatives.

## HOW TO READ CODES

## PACKAGING

# RR01

## HW - Razor with rounded corners

Razors with rounded corners improve the quality of cut on spiral cutterheads, avoiding the lines left by the sharp edges of conventional square spurs.

# RR10

## HW - 30° razor with rounded edges

Razors with rounded edges greatly reduce tear-out on helical cutterheads and planers. Their design prevents the formation of the waves that would otherwise be generated by the positioning with shear angle.

# RR11

## HW - 30° razor with both rounded corners and edges

Razors with rounded edges and corners greatly reduce tear-out on helical cutterheads and planers. Their design prevents the formation of the waves that would otherwise be generated by the positioning with shear angle.

L	H	S	R	Quality of HW	α	Code	SAP
